

FAST INFLATION KIT

RAPID DEPLOYMENT

The Zodiac Milpro the fast inflation system has been developed to meet the demanding requirement of military and professional users.

Based on the use of a standard scuba-diving or CO₂ cylinder, the fast inflation system greatly enhances inflation times during urgent boat operations requiring immediate deployment. This system releases air or CO₂ into the main buoyancy tube, keel, FUTURA™ speed tubes and HPP floor automatically and inflates the boat within minutes.

This system is available for the Futura Commando and Emergency Response Boat ranges, and is available for every floor version.

For special applications, Zodiac Milpro developed also the Venturi immersion kit, increasing underwater cache efficiency.

VENTURI IMMERSION KIT

This kit, available on FC-420, FC-470, FC-530 and FC-470 EVOL7, makes boat deflation faster and immersion operations safer.
